

Greenhouse Gas (GHG) Services

GHG verification, validation, reporting and compliance

E5 has conducted hundreds of emission inventories and air quality audits, including, criterion pollutants, air toxics and greenhouse gases (GHGs). California's AB 32 - Global Warming Solutions Act of 2006 requires over 700 facilities in California to report their GHG emissions, including, cement plants, electricity providers, petroleum facilities and large manufacturing enterprises.

AB 32 Accredited Verifiers

Pursuant to AB 32, California Air Resources Board (CARB) requires that all mandatory GHG inventory reports for calendar year 2009 and thereafter be verified by a CARB accredited verifier. As an accredited verification body in California, E5, Inc. has fully trained and accredited professional staff for General Stationary Combustion, Petroleum Refineries, Cogeneration, Hydrogen Plants and Electrical Power Sector.

GHG Qualifications and Expertise

E5's qualified and certified staff of air quality professionals routinely advise, lead and support GHG projects. Combined with our technical expertise in air pollution compliance, technology and regulatory affairs, E5 offers several technical services for GHG reduction projects, including, verification, validation, emission credits, clean technologies, offset projects and program audits.

GHG Management Program and Services

- GHG Reporting Verification
- Emission Credits
- GHG Emission Inventories
- Corporate Program Audits
- Validation and Offset Projects
- GHG Advisory and Consulting

Accredited GHG Verifiers for:

- AB 32 GHG Inventories
- General Stationary Combustion
- Petroleum Refineries
- Cogeneration
- Hydrogen Plants
- Electricity and Power Sector
